YASHVEER SHUKLA

Software Engineering Intern Candidate | Java • Backend Systems • Full-Stack • Applied AI

Portfolio | Gmail | LinkedIn | GitHub

SUMMARY

Second-year B. Tech CS student with strong **Java** and CS fundamentals (DSA, OS, DBMS, OOP) who builds **full-stack, API-driven systems** end to end: **Spring Boot, PostgreSQL, Redis, Docker, AWS, React**. Hands-on with **LLM tool-calling** and ML inference in production-style projects; Smart India Hackathon 2026 team and V-TAPP Hackathon winner.

TECHNICAL SKILLS

Languages: Java, JavaScript, Python, C++, C, SQL
Backend & Databases: Spring Boot, FastAPI, REST APIs, JWT/RBAC, PostgreSQL, Redis, Microservices, Database Design & Indexing
Frontend & Tools: React.js, HTML/CSS, Git/GitHub, Docker, AWS (EC2/S3/Lambda), CI/CD basics
AI / ML: LLM APIs & Tool-Calling (Gemini), Prompt-Injection Defence, ONNX Runtime, CNNs, XGBoost, Scikit-learn
CS Fundamentals: Data Structures & Algorithms, Operating Systems, DBMS, OOP, System Design, Concurrency & Async Programming

EXPERIENCE

Co-Founder & Backend Engineer | PreneurX (Early-Stage Startup) *Jun 2025 – Jul 2025*

- Launched the production backend for **preneurx.in**, as measured by a live, market-ready platform, by architecting the server-side infrastructure and integrating it with the React.js frontend.
- Kept pre-launch iteration fast as requirements shifted, as measured by reusable, state-isolated modules and a repeatable release flow, by owning hosting, domain setup, and deployment.

ML Mentorship Trainee | LaunchED Global × IIT-KGP *Mar 2025 – Apr 2025*

- Improved a CNN image classifier end to end, as measured by confusion-matrix error analysis across training runs, by building preprocessing and augmentation pipelines and tuning architecture and hyperparameters.

PROJECTS

E-Commerce & Inventory Micro-Platform | Java, Spring Boot, PostgreSQL, Redis, Docker *Production-Grade, End-to-End*

- Engineered a production-grade e-commerce backend in Java Spring Boot, **reducing catalogue query latency by 45%** through Redis caching and optimized database indexing.
- Secured REST endpoints and enforced **Role-Based Access Control (RBAC)** with stateless JWT authentication and custom CORS policies for seamless frontend integration.
- Automated concurrent order processing and inventory management using **ACID-compliant transactions** and asynchronous event-driven workflows via Docker and PostgreSQL.

KrishimitraAI | React, FastAPI, ONNX, XGBoost, Gemini LLM, AWS *Smart India Hackathon 2026*

- Delivered a bilingual (English/Odia) full-stack agri-advisory platform for **4.2M farming households** across 30 Odisha districts, by architecting a React + FastAPI system with live weather and mandi-price REST integrations.
- Achieved **sub-2-second offline disease detection across 38 classes** by deploying an ONNX EfficientNet model with a rule-based fallback, keeping every endpoint live with zero connectivity.
- Built an LLM chatbot (Gemini with offline fallback) and a yield predictor, as measured by a **65/35 XGBoost–Random Forest ensemble over 13 features** with a physics-based correction layer.

Smart India AgriMonitor | MATLAB *Winner, V-TAPP Hackathon*

- Won V-TAPP Hackathon by building a decision-support app with a **3-tier (Normal/Warning/Critical) engine** over 72-hour sensor histories, auto-generating prioritized prescriptions with fail-safe CSV/XLSX ingestion.

EDUCATION & CERTIFICATIONS

VIT-AP University, Andhra Pradesh | B. Tech, Computer Science and Engineering *Sept 2024 – Jun 2028*

Certifications: AWS Academy Graduate – Cloud Developing • Hedera Certified Developer Associate (HCDA) • Oracle Certified Foundations Associate
